Data Analyzer

“We Take The Dust Out of Industry!”™

Midwesco's Black Box

Increase the productivity of your plant, meet the latest market demands and shorten your time to market with a portable diagnostic system. Make strategic decisions regarding your baghouse/dust collector performance and reduce maintenance costs with real-time data analysis.

Midwesco's Black Box has it all! Midwesco's Black Box is a portable diagnostic system that monitors air flow, emissions, Delta P, O₂ inlet/outlet and detects broken bags within your baghouse/dust collector.

Midwesco's Black Box can also be used for

- Locate Failed Solenoid And Diaphragm Valves
- Determine Which Row Has Failed So That You Can Isolate The Row To Reduce Emissions Until Repair.
- Test New Media.
- Analyze A Conversion From Conventional Filter Bags To Pleated Bags and Obtain Accurate Product Comparison Readings.
- Data is saved in a built in Portable Controller that can be wirelessly downloaded to any laptop.
- A Permanent System Is Also Available
