

TECHNICAL DATA SHEET

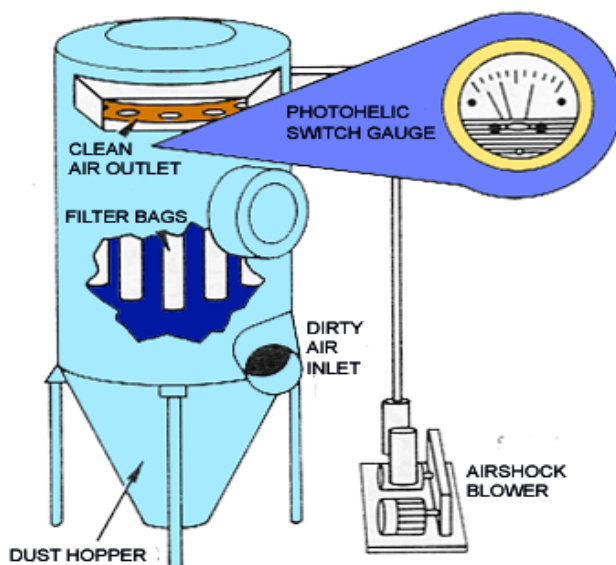

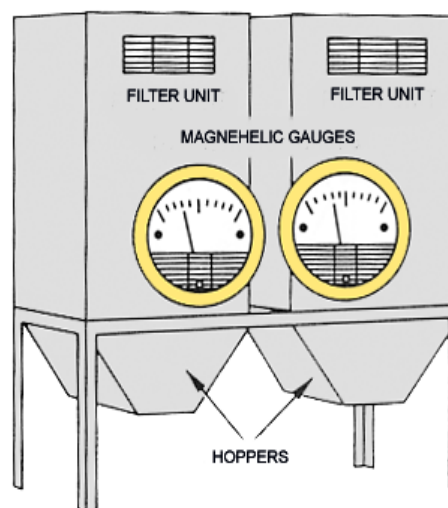

MAGNEHELIC® & PHOTOHELIC® GAUGES

Midwesco Filter utilizes these Dwyer® products to help maintain and operate baghouses. Understanding and monitoring differential pressures within your baghouse are an essential piece of information to have and record.

Magnehelic® differential pressure (DP) gauges can monitor each baghouse or baghouse module and indicate the DP within the module. Knowing the DP will direct maintenance personnel when and how often the initiate cleaning of the baghouse.

Photohelic® differential pressure gauges/switch can monitor the DP within the baghouse or module and then initiate a relay closure which can activate your collector's cleaning mechanism. This "clean on demand" tool prevents excessive or over cleaning of the filters, which can help to eliminate visible emissions and premature filter failures.

Installation accessory kits and purge valve sets are also available from Midwesco Filter.

Contact your Midwesco representative to learn more details of this product and others.
