Baghouse maintenance solutions that work for your business.

EXPERIENCED • TRAINED • CERTIFIED • PROFESSIONAL

Midwesco® is known as the leader in providing high-quality filter replacement services. We are experienced, professional, meticulous in every aspect of our work, and will guarantee your satisfaction. Our service crews are trained and certified to properly handle the filters during installation to prevent damage, spot improper filter installation, find cage defects, and scan the baghouse/components during installation to spot deficiencies. With numerous service crews located across the United States, Midwesco® is able to respond quickly to your needs as they arise.

experienced solutions for your baghouse maintenance needs

INSPECTIONS & CHANGE OUTS

With Midwesco®, services are more than just a bag change out. We developed the “Minimal Impact Change-Out Services” method which utilizes impermeable super sacks that can be lowered to the ground and placed in an isolated containment area. This results in minimal site contamination and the disposal limits additional ground contamination to your plant. Midwesco’s crews are also OSHA, MSHA, and HAZWOPPER trained and certified.

REBUILDS AND RETROFITS

Whether your baghouse needs to be rebuilt or just updated, Midwesco’s service crews are experienced to provide Turnkey Project Management. We perform structural modifications, blast clean and coat interior modules, hopper, collector door, and floor replacement, cleaning system repairs and enhancements, baffle design/install as well as complete conversions from old shakers to pulse jet baghouses.

CONVERSION & TROUBLESHOOTING

We have successfully retrofitted EAF Steel Mill baghouses with “thimble-less” floors. Midwesco® Filter was the first company to demonstrate this innovation, which many competitors have copied. We also offer baghouse troubleshooting services to solve those pesky problems and keep your baghouse in top running order.

COATINGS

We evaluate and inspect each site specific to the conditions and needs of the baghouse. Midwesco® Filter has applied baghouse interior and hopper coatings that ranged from simple brushing to spray on or trowel applied. Midwesco® completely understands that surface preparation, treatment, and curing are the keys to a successful and enduring baghouse coating.

AIR FLOW STUDIES

We offer pitot tube testing services and airflow studies in order to assist you to better understand the effectiveness of your baghouse equipment. Written observations and recommendations are then provided to you for review.

BAGHOUSE SEMINARS

Our seminars conducted at your site are designed to provide you a thorough understanding of the types of air pollution control equipment available on the market today. We familiarize your Team with the knowledge and procedures to maximize the efficiencies and minimize the costs of operating your baghouses.

WE’VE WORKED WITH A DIVERSE CUSTOMER BASE. HOW CAN WE HELP YOU?
