Membrane Filter Bags

“We Take The Dust Out of Industry!”™

Midwesco® Brand Membrane Filter Bags

Membrane filter bags has been a proven performer in both reverse air and pulse jet baghouses for numerous years over various market segments. Membrane has also proven to be a cost-effective choice for dust particle collection and emission control. Due to the ePTFE membrane's ability to integrate to the base filter media, you can achieve 99.99% filtration efficiency. Its smooth surface provides a primary dust cake and the media's lack of loose fiber ends provides a hydro and oleophobic characteristic to provide a secondary cake release.

Through our partnership with W.L. Gore, we are able to utilize the 30 years of ePTFE technology through their Pristine® filter media (now ETV Certified) along with our application experience to provide a high quality affordable membrane filter.

All of this is done with you in mind -- provide quality cost effective products while meeting the stringent U.S. EPA regulations at the same time. In turn you can improve your plant's operational efficiency, reduce downtime and increase your revenue and marketshare.

SO WHY CHOOSE EPTFE MEMBRANE OVER CONVENTIONAL FILTER MEDIAS?

1. Reduced Emissions (PM 10, PM 2.5 and Sub-Micron PM)
2. Lower Pressure Drop
3. Longer Effective Bag Life
4. Good Recovery from Upset Conditions
5. Full Collection Efficiency At Start-Up
6. Reduced Cleaning Air Consumption
7. Energy Savings
