Rotary Airlocks & Dump Valves

“We Take The Dust Out of Industry!”™

Rotary Airlocks and Dump Valves

Midwesco® Filter supplies Rotary Airlocks and Double-Dump Valves for a variety of heavy and medium duty applications. Rotary Airlock Valves are used in pneumatic conveying systems and dust control equipment to maintain an even flow of material through processing systems.

With quality features and options, these accessories can meet the needs of any baghouse conveying system. The airlocks construction range from cast iron, aluminum and stainless steel with plating options available for high abrasion or non-contamination specifications.

Rotary Airlocks sizes can range from 2” to 36” with round and square inlets. Airlocks are produced with or without motor/drive packages ranging from 1/2 Hp to 2 Hp.

Double Dump Valves are suitable for discharging dry dust, powder, granules or fibrous materials where maintaining an effective gas seal is required. Units are available for pressure differentials of up to 20” W.G.
