Seamless Tube® Filter Media

We Take The Dust Out of Industry!®

Achieve 30% Longer Filter Bag Life With . . . Midwesco's Seamless Tube® Filter Media.

An industrial leader for over 30 years, Midwesco's Seamless Tube® is ideal for low temperature shaker and reverse air filtration systems.

Every feature of this media structure is engineered to optimize filtration performance. Specifically, the mass of woolen system without the cost; the density of shaker felt without forfeiting high flow capacity and excellent flex life; the efficiency of woven media without the low initial permeability. *With this media, you receive the durability and cake formation of all filament and spun medias.*

Our Seamless Tube® media is available in:

- Roll good form (127mm, 150mm, 203mm, 292mm and 305mm).
- Reversible, thus offering two filtration sides. One side offers a filament construction for excellent dust release. The other offers a raised napped surface (staple fibers) thereby improving efficiencies.
- Filter bag form. We can convert the media to a filter bag form with constructions that include, anti-collapse rings, suspension cap, straps or tail.

The Midwesco Seamless Tube® media is a successful proven performer in many filtration applications such as iron and steel, foundry and cement to name a few. We have a free sample and product data sheet waiting for you.

Just call our offices today to discover how our media can
improve your air flow and filtration capacity!
