

## INDUSTRY PEER TESTIMONIALS:

*"In preparation for a stack emissions testing at two BMC asphalt plants, Albarrie was contacted for pricing on new bags. During conversation, Albarrie explained the HEC cleaning service. We at BMC decided to use the service rather than buy new bags. Resulting was a 50%+ savings, and service at both plants was completed in several hours. The bags were cleaned to new flow levels. Due to Albarrie's cooperation with our schedule, we experienced no loss in production. Thus, when future problems arise, I will consider HEC cleaning service."*  
Jim Chenoweth, Lead Asphalt Sup't. BMC Western Division

*"We, Lafarge, were preparing one of our portable baghouses for the summer season and had concerns of a coating of RAP on the filter bags. A used bag was removed and sent to Albarrie Canada for testing. The bag had low "as received" flow values. New bags were being considered for the baghouse to have a trouble free production season. Albarrie explained their new TASK service to us and we decided to try it. They cleaned the filter bags "Insitu" and brought the old bags back to near new flow values. The service took less than a day! We would consider using the TASK service during the season to overcome any upsets that may interfere with production."*  
Dave Henderson, Asphalt Sup't.

- CMI Baghouse
- 1200 Meteor Filter bags ( P84 / Basalt)
- Installed December 1999
- Replaced 100% Aramid
- Filter bags have seen One Million Tons
- High levels of RAP generating hydrocarbons smoldered in the hopper—causing PTFE thread to melt, resulting in unexpected change out
- Continental Paving ordered another 1200 filter bags with "protective boot" in anticipation of above obstacle

TASK America... an Albarrie / Midwesco Alliance!

## ASPHALT OPERATIONS: SPRING START UP GUIDE

Extend your filters for an extra season with TASK, or replace them with more efficient, cost effective filter bags.

Call our Sales Department to speak with a Technical Representative for further details about our extensive line of air pollution supplies and services:

*Innovative and unique cleaning service (TASK)*

*Fabrics for every application and process*

*Cages*

*Baghouse Accessories*

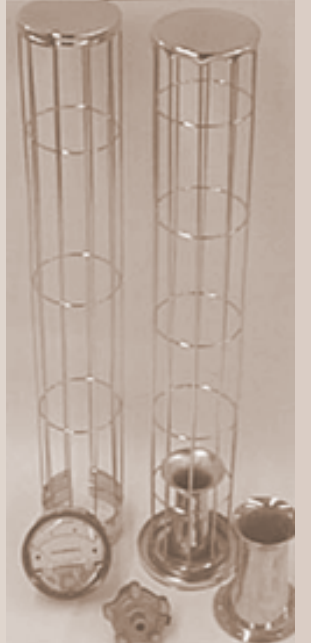

*Leak Seaker® Compound*

*Pre Kote® Filter Aid*

*Laboratory Testing*

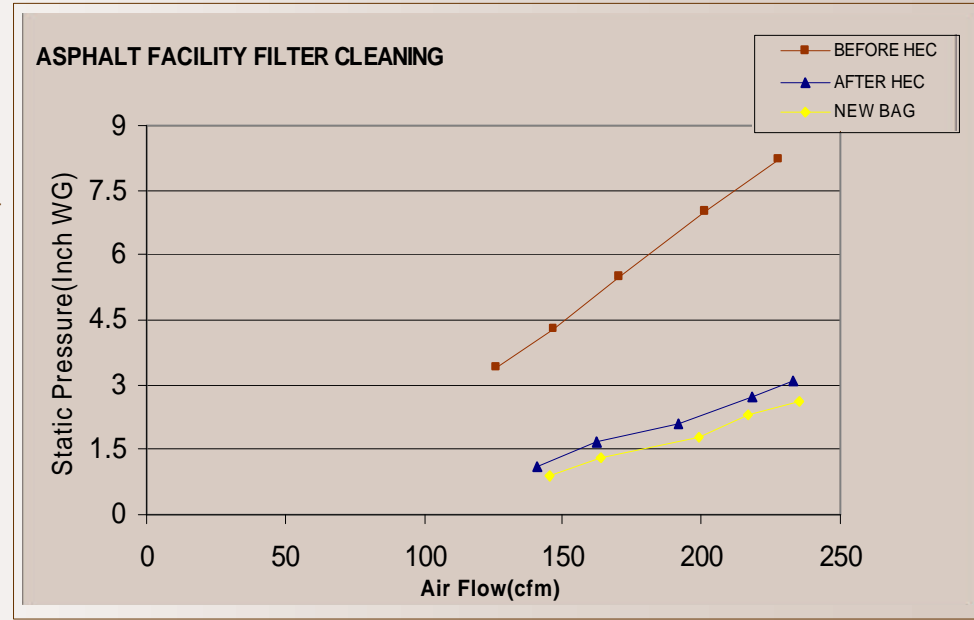

385 Battaile Drive PO Box 2075 Winchester VA 22604

HEC High Efficiency Cleaning can “BLOW” new life into your dead filter bags & resurrect their important performance features by returning:

- Higher air flow
- Lower pressure differential
- Increased production if baghouse is process related
- Lower power consumption
- Reduced compressed air consumption
- Our HEC Service is performed:
- On-Site, in-situ (in-place), no bag removal required
- With no downtime, if system has offline compartment isolation capabilities
- No risk of damage to bags, verified by precleaning test

TASK America's "LD Mobile" Air Permeability Testing Unit :

This unique unit is designed to:

Test the effectiveness of in-place High Efficiency Cleaning

Measure air permeability of the "inplace" bag

Produce data used to create a Pressure vs Airflow Chart

Observe immediate results directly on-site

Our "LD Mobile" and in-house Lab Services determine fabric condition, cleanability and approximate level of recovery the HEC will provide.

TASK America's HEC High Efficiency Cleaning Device

If experiencing short bag life caused by high differential pressure HEC will provide:

Effective cleaning and improved air flow

Single bag cleaning that is 10 times greater than Pulsejet cleaning.

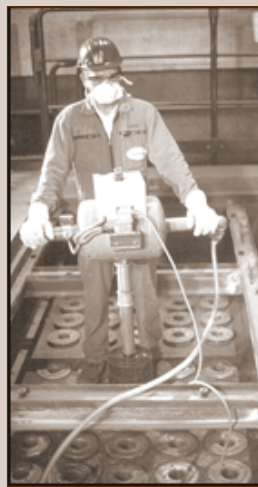

Reduced pressure differential.

Cleaning during normal operation, if compartment isolation is possible.

No damage to filter bag as there is no removal.

Immediate and economical results.

In addition, Leak Detection tests can be performed to verify filter bags were undamaged and seals remained intact.
