

TECHNICAL DATA SHEET

BAG CUPS, VENTURIS, AND GASKETS

Whether you are renovating or building a bottom entry style baghouse or bin vent, one must remember that there are more than just filter bags to ensure the proper operation of the dust collector. Your filter bag and cage are attached to a bag cup and venturi arrangement, and then clamped to promote an airtight seal. O-rings, venturi seals, and clamps are often neglected and forgotten items that require replacement when changing the filter elements.

Bag cups and venturis can be spun from various thickness of metal, gauges ranging from 20 to 12, 16 gauge being the most popular. Cast aluminum parts are also used by some OEMs. Spun parts can be produced from mild steel, galvanized steel, stainless steel, and can be epoxy coated or plated. O-rings and venturi seals are made from various materials ranging from polyester & aramid felts, to neoprene or silicone rubber. Shapes and sizes are dependant upon the dust collector type.
